

GitHub Gitkraken Practical

1)

1. Log in to your GitHub account.
2. Create a repository called TG [Your index number].
3. Make your repository private.
4. Now make your repository public again.
5. Add your neighbor student as a collaborator to your repository.
6. Make sure your neighbor can see your repository in his GitHub account.
7. Now remove the collaborator from your repository.

2)

1. Login to Gitkraken using GitHub account.
2. Clone your repo to your local.
3. Create a branch called "Develop"
4. Make some changes to your local repository using your local editor.
5. Stage the changes and commit them.
6. Push the changes to the remote.
7. Go to GitHub account make sure your branch is there with the changes.
8. Finally make a pull request to the master branch and merge them.
